CORRECTIONS TECHNOLOGY ASSOCIATION

COLLABORATION · INNOVATION · VALUE

cta

Are You Part of the Conversation?

Are you part of the conversation?

In a time of constrained budgets and evolving policies, state, county and provincial corrections agencies across North America face enormous challenges.

Agency leaders everywhere are increasingly turning to their CIOs, IT directors and technology project managers to help address business objectives through application of intelligent, cost-effective technology solutions. Given the scale and expense of most technology initiatives, your agency deserves the collective insights and best practices that only your peers across the industry can provide.

The Corrections Technology Association can help. As the leading voice for corrections technology decision-makers and practitioners, the CTA provides an open forum for discussion, collaboration and education to ensure the success of technology initiatives to address agency objectives.

If your agency has placed technology leadership in your hands, you need to be part of this valuable, ongoing conversation.

cta CORRECTIONS TECHNOLOGY ASSOCIATION

The Corrections Technology Summit

For more than 15 years, the CTA has hosted the Corrections Technology Summit.

At the annual four-day conference, CTA members gather to discuss key trends in the application of technology within corrections environments, and present best practices and lessons learned from recent technology initiatives.

Supported by a corrections-focused vendor community, the Summit provides an open, non-commercial forum for corrections technology leaders. Members gain insights to support their own initiatives, and establish a network of peers on which they can rely for advice throughout the year.

Summit attendees benefit from highly informative presentations and workshops focused on a range of corrections technology categories, including cyber security; data management/sharing, reporting, and analytics; mobility; offender management technologies; and emerging technologies.

The Corrections Technology Summit takes place in the late spring each year, and rotates through easy-to-reach destinations in the east, mid-west and west.

Upcoming Corrections Technology Summit locations:

2017 – St. Louis, Missouri

2018 – Daytona Beach, Florida
